

COLORIAGE

Fast Coloring for Photoshop

by Charlie Mars
www.charlie-mars.com

• SCRIPT INSTALLATION

1. Locate the Photoshop Scripts folder:

Mac:

`/Applications/Adobe Photoshop [version]/Presets/Scripts/`

Windows:

`C:\Program Files\Adobe\Adobe Photoshop [version]\Presets\Scripts\`

2. Copy the "Coloriage.jsx" file into this folder
3. Restart Photoshop
4. The script is now accessible via:
`File > Scripts > Coloriage`

• CREATE A KEYBOARD SHORTCUT

(optional but recommended)

1. Open the Actions panel: Window > Actions (or Alt+F9)
2. Create a new action set:
Click the "folder" icon at the bottom of the panel
Name it "My Scripts" (or any other name)
3. Create a new action:
Click the "+" icon at the bottom of the panel
Name: "Coloriage"
Function Key: choose your key or combination
You can add Shift or Ctrl/Cmd if the key is already taken
Click "Record"
4. Recording starts automatically:
Go to: File > Scripts > Browse...
Select "Coloriage.jsx"
The script will run (normal, it's recording the action)
5. Stop recording:
Click the "Stop" button (square) at the bottom of the Actions panel
6. Done! Your keyboard shortcut is now active.

• **USAGE**

1. Select an area on your line art layer (using Lasso, Magic Wand, or any other selection tool)
2. Run the script:
 - Via menu: File > Scripts > Coloriage
 - Via your keyboard shortcut (e.g., F5)
3. The script will automatically:
 - Expand the selection by 2 pixels
 - Create a new layer
 - Fill with foreground color
 - Move the layer below the original
 - Merge while keeping the original layer name
4. The selection remains active! You can run the script again to expand by another 2 pixels.

• **REQUIREMENTS**

- Photoshop CC 2020 or higher (tested on 2020 and 2024)
- An active selection on a normal layer (not the background)
